Professional Summary

React Native and Full Stack Developer with expertise in building scalable healthcare and service-based mobile applications. Proficient in React Native, JavaScript, TypeScript, Node.js, Express.js, MongoDB, PostgreSQL, REST API integration, Redux Toolkit, and JWT Authentication. Experienced in developing production-grade cross-platform mobile applications, implementing secure authentication systems, integrating backend services, optimizing application performance, and architecting reusable component libraries. Strong understanding of software development lifecycle, debugging, testing, state management, and responsive mobile UI development with a focus on maintainable, user-centric solutions.

Technical Skills

- **Mobile & Frontend:** React Native, JavaScript (ES6+), TypeScript, HTML5, CSS3, Responsive UI Development, Cross-Platform Mobile Development, Reusable Component Architecture
- **State Management & Navigation:** Redux, Redux Toolkit, Context API, React Navigation
- **Backend & APIs:** Node.js, Express.js, RESTful APIs, API Development, API Integration, Axios, JWT Authentication, Authentication & Authorization
- **Database:** MongoDB, PostgreSQL, MySQL
- **Mobile & Device Integration:** Android, Bluetooth Low Energy (BLE), Hardware/Device Integration
- **Development Tools:** Git, GitHub, Postman, VS Code, Android Studio, Firebase
- **Core Engineering:** CRUD Operations, Secure Authentication, State Management, Performance Optimization, API Testing, Error Handling, Debugging, Code Review, Agile Development

Professional Experience

Software Developer *Nov 2025 – Present*
eHealth Tech Systems

- Developing and maintaining production-grade healthcare mobile applications using React Native, TypeScript, Redux Toolkit, and RESTful APIs for patient-facing platforms and partner applications
- Architecting scalable, reusable mobile UI components and implementing responsive cross-platform interfaces optimized for Android devices
- Integrating backend services using Node.js, Express.js, and PostgreSQL to support complex healthcare workflows including patient management, appointment scheduling, and clinical data processing
- Implementing JWT-based authentication and role-based authorization systems with secure session management and token refresh mechanisms
- Optimized React Native application performance by reducing unnecessary API calls, improving state reuse, and implementing lazy loading for heavy screens.
- Developing workflow-driven features including patient onboarding, profile management,

booking systems, status tracking, and reporting modules with real-time data synchronization

- Building validation frameworks and error handling mechanisms ensuring robust data processing across multiple healthcare products
- Collaborating with cross-functional teams including frontend, backend, QA, and product stakeholders to deliver features, resolve production issues, and maintain application stability
- Conducting code reviews, writing comprehensive tests, participating in deployment processes, and contributing to continuous engineering improvements

Full Stack Developer Intern *Aug 2025 – Oct 2025*
eHealth Tech Systems

- Developed and consumed RESTful APIs for user and data management systems implementing CRUD operations and backend validation
- Assisted in frontend and backend feature development using modern web technologies and frameworks
- Participated in debugging, testing, and deployment processes for production applications
- Gained practical exposure to software development lifecycle and collaborative Agile development practices

---

Projects

Food Delivery Application *Full Stack Project*
Tech Stack: React Native, Node.js, Express.js, MongoDB, JWT Authentication, REST APIs

- Designed and developed a complete full-stack food delivery platform from scratch
- Implemented secure user authentication and authorization using JWT Authentication
- Developed restaurant listing, menu browsing, cart management, and order processing functionalities
- Built scalable RESTful backend APIs using Node.js and Express.js with modular architecture
- Managed user, product, restaurant, and order data using MongoDB with efficient schema design
- Performed comprehensive API testing and validation using Postman
- Followed modular architecture, reusable component development, and scalable coding practices

---

Education

Bachelor of Computer Applications (BCA) *2023*
Dahiwadi College, Shivaji University
CGPA: 7.42
